ABSTRACT

A user interface unit (30) that specifies a copy area including plural objects from copy source information displayed on a display unit (20) at copy timing, and that specifies a past area from past target information at past timing, a semantic analysis performing unit (42) that performs a semantic analysis of each of the plural objects, a paste target selecting unit (72) that selects paste targets which match with results of the semantic analysis, and a pasting unit (73) that pastes the plural objects to the paste targets.
